

Lab 1 guide (lab overview)

This week's lab

In the first in-person lab you'll meet your section TAs and learn how our Labs will work this semester. Then we'll get busy learning how to grow some fungi!

First, we'll learn about Petri Plates and nutrient agar and sample fungal spores from the air. Then, we'll make mushroom bags to grow oyster mushrooms.

There's no assigned reading this week, and no quiz.
