

UNIT 2 Module 2 Apply Logic to Your Data Sets

Apply Logic to Your Data Sets

In this module, you will examine sample data sets that you can use to practice critical skills and activities. You will identify the ways that you can format data to be visually appealing and digestible, and you will participate in a discussion about how you will use applied logic to answer critical questions. You will explore functions in Excel, including using Nested IF statements. Finally, you will complete Parts One and Two of your course project, in which you practice the skills presented in this module.
