

# UNIT 6 Module 2 Making Data More Interactive

## Making Data More Interactive

How often do you or your organization's stakeholders lack the data to formulate specific plans or make sound decisions or judgments? Oftentimes, the real challenge is locating data that is pertinent to your needs and converting it into an interactive and actionable model.

In this module, you will see how you can use Excel to enhance the interactivity and relevancy of your data. You'll identify how to insert slicers to filter and analyze table and pivot table data, change the perspective of a pivot table to view a specific subset of data, and use Data Analysis Expressions (DAX) formulas to add columns of information in a table and refine reports.
