

UNIT 5 Module 1 Prescriptive Modeling using Solver

Prescriptive Modeling Using Solver

It is important to make the best possible business decisions, whether you're assigning people to tasks or figuring out purchasing decisions. Solving complex business problems related to organizational goals can be a challenge. In this module, you will examine ways to make complex analytical decisions more effectively using Excel's features for prescriptive analytics. In this module, you will examine how to build models and generate results that maximize outcomes while suggesting a course of action. You will practice setting up business models in a worksheet and use Excel's Solver function to determine the best set of decision values that will meet your objectives.
