

UNIT 3 Module 3 Wrap-up: Visualize with Charts and Graphs

Visualize with Charts and Graphs

As you have seen, it's much easier to digest complex information if it's presented to you in a pie chart, bar chart, or graph. A line chart can help you show trends over time, while a pie chart can help you show the breakdown of categories. In this module, you examined some options for presenting your data in these various ways, and you explored methods of creating different charts and graphs. You heard from Professor Haeger about the functions that Excel offers you in this regard. You also completed Part Three of the unit project, in which you practiced working with charts and graphs in sample datasets.
