

# UNIT 5 Module 3 Reporting and Managing Solver Models

## Reporting and Managing Solver Models

Sometimes when you run a Solver model, you will get a message, telling you that Solver could not find a feasible solution. What do you do? This is an indication that you need to make some adjustments to your model. In this module, you will examine how you can respond if the Solver model isn't feasible. You will examine different helpful reports and find out what they can tell you about the constraints and inputs you have, and you will work towards a better result.
