

# UNIT 3 Module 3 Visualize with Charts and Graphs

## Visualize with Charts and Graphs

Many times, it's much easier to digest complex information if it's presented to you in a pie chart, bar chart, or graph. A line chart can help you plot trends over time, while a pie chart can help you show the breakdown of categories. In this module, you will examine some options for presenting your data in these various ways, and you will explore their benefits and how to create these different charts and graphs. You will also complete Part Three of the unit project, in which you practice working with charts and graphs in sample datasets.
