# UNIT 6 Module 2 Wrap-up: Making Data More Interactive

## Making Data More Interactive

As you have seen, effective business analytics requires you to model your data so that other stakeholders can readily digest and interact with the data as well as make informed decisions based upon it. In this module, you practiced critical functions, including inserting slicers to filter and analyze table and pivot table data efficiently, changing the perspective of a pivot table to view a specific subset of data, creating DAX formulas to add columns of information in a table and enrich reports, and building dynamic, interactive dashboards.
