UNIT 5 Module 1 Wrap-up: Prescriptive Modeling using Solver

Prescriptive Modeling using Solver

Solving complex business problems related to organizational goals can be a challenge. You have seen how you can begin to use Excel's Solver function to inform your business decisions. You explored the ways that you can make complex analytical decisions more easily using Excel's features for prescriptive analytics. You examined how to build models and generate results that maximize outcomes by suggesting a course of action. You practiced setting up complex business models in a worksheet and used Excel's Solver function to determine the best set of decision values to meet a given set of objectives.
